

Leitz loves wood

Leitz – full-range supplier and a producing service provider

We shape the future

From cutting material to clamping chuck! Leitz provides a full spectrum of tool ranges for all solid wood, wood derived materials and plastics processes, as well as the preliminary stage of progressive cutting material development with Boehlerit and suitable clamping technology for machinery support with Bilz. Everything from one source developed and produced by Leitz.

This range is supported by a globally unique extensive service network which guarantees all customers the professional reconditioning of tools to original manufacturer quality. Leitz sees this absolute reliability of service, sophisticated logistics through to regular collection and delivery services for tools as the partnership's significant success factors for customers as well as for their own company.

Beyond this more and more customers today see themselves as being prompted to rethink the value-added chain in their production and company organisation, to detach themselves from their own tool provision and management so that they can use capital and capacity commitment elsewhere geared towards success.

Therefore, today the Leitz group sees itself as a "producing service provider", providing modular and complete tool management models with its know-how and range of tools produced by themselves, which customised to customers' concepts, contribute to more efficiency and also to a significant increase in quality of production.

The Leitz Corporate Group

Leitz GmbH & Co. KG with its headquarters in Oberkochen, Baden-Wuerttemberg, Germany is a leading technology manufacturer of machine-driven precision tools and process designed tool systems for the professional processing of solid wood, wood derived and plastic materials.

Leitz together with Boehlerit GmbH & Co. KG in Kapfenberg, Austria and Bilz GmbH & Co KG in Ostfildern, Germany form the Leitz corporate group.

Boehlerit is a specialist in the development and production of innovative tungsten carbide and diamond cutting materials and in this regard also manufactures special tools for metal processing.

Bilz operates in the field of tool clamping technology and is a leading manufacturer of thermic clamping systems for high-speed machining in metal, wood and plastics processing.

The Leitz corporate group has production facilities in Europe, America and Asia, countless sales and service companies all over the world, where important locations are concentrating on or re-establishing relevant industries. The 4,800 employees of the Leitz corporate group generate an annual turnover of over 380 million Euros.

Leitz: Family-run company with heritage

The family-run company Leitz was one of the first in Germany to gear its tool range totally to machine-use. With progressive products endorsed by several patents, Leitz acquired internationally recognised expertise. In this tradition Leitz still sees itself as a partner to its customers, committed equally to wood craftsmanship, the woodworking industry and top quality as far as economic resource-preserving tool development is concerned.

More than 5% of the annual total turnover is permanently invested in the research and development of products. Interesting innovations at Ligna 2009 corroborate the claim to leadership in technology.
